

CHAPTER 01 EXAMPLES : OUTPUTS || CORRECTIONS

1. hello_world.php

2. booklist.php

These Books are currently available		
Title	Year Published	ISBN
Gone Girl	2014	978-0307588371
If I Stay	2009	978-0142415436
the Girl on the Train	2015	978-0857522313

* Just make sure that the mysqli function is installed for this to work :
sudo apt-get install php5-mysql

3. form.php

Enter your name:

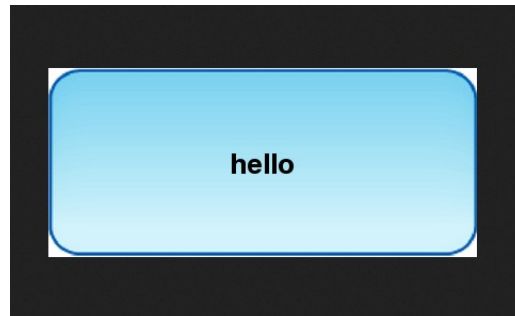

Greetings, gellyace, and welcome.

Enter your name:

4. graphic_example.php

Enter message to appear on button:

Create Button

Alterations that I made for this example to work

```
putenv('GDFONTPATH=' . realpath('.'));  
$font = "ag-helvetica-bold-35361.ttf";
```

1. The font variable is having a hard time in locating as to where my font is stored (it is actually on the same folder as the php file) so I used the *putenv* function to set the environment variable for GD

2. I changed the *\$im* to *\$image* since *\$im* is an undefined variable in the whole program

```
$black = imagecolorallocate($image,0,0,0);
```

* just make sure to install the needed packages for this example
